All tube joint welds shall be proven using a soap test [with minimum 1 atm air] prior to rolling.

11.7 氦泄漏试验应按照ASME规范第五节第10条的要求进行, 当换热器倾斜以向管侧的单个收集点提供良好的氦气流量时, 壳侧应使用氦气加压。任何超过1 x 10-4标准cc/sec的泄漏都需要维修。

A helium leak test shall be performed in accordance with the requirements of ASME code, Section V, Article 10. The shell side shall be pressurized with helium while the exchanger is inclined to provide good flow of helium to a single collection point on the tube side. Any leakage in excess of 1 x 10-4 standard cc/sec warrants repair.

11.8 焊接完成后, 氮气泄漏测试前, 进行最终的胀接

Do final tube rolling/expansion after completion of the welding and before the helium leak testing.

11.9 管子应按整个管板厚度进行胀接。胀管器上应使用止动块, 以确保膨胀在图上给出的限制范围内。

The tubes shall be rolled for the entire tubesheet thickness. Stop shall be used on tube roller that assures expansion is within limits given on sketch.

11.10 应提供最终成功氦试验的认证试验报告, 并由独立的第三方见证人签字

A certified test report of the final, successful helium test shall be provided and signed by an independent third party witness.
